Virtual Desktops on PCI-E SSD -- Getting the image ready

Published 30 May, 2012 | By James Preston | Edit

This entry is part 3 of 3 in the series Virtual Desktops on PCI-E SSD

One of the great things about VDI is the ability to create a 'golden image', that's one single image that includes the OS and Software which can be accessed from any endpoint. Whatever VDI software you go with will then take that golden image and duplicate it multiple times to provide the desktops for your users.

However this masse creation of desktops can cause a bit of a IO overload.....one problem of many that a SSD can solve....
